

Modul:DemoTemplate/Doku

Dies ist die Dokumentationsseite für Modul:DemoTemplate

Usage

Simply place "#invoke:DemoTemplate|" before a call to a template. For example, `{{#invoke:DemoTemplate|Convert|10|km|nmi|abbr=off}}` yields the following:

```
{{Convert|10|km|nmi|abbr=off}} → Vorlage:Convert
```

This module handles both named and positional parameters as well as equals signs in both parameter names and values correctly, so this (for example) will work: `{{#invoke:DemoTemplate|1x|1=Some parameter with an = sign in it}}`

```
{{1x|1=Some parameter with an = sign in it}} → Vorlage:1x
```

Note, however, that pipes, curly braces, etc. are not currently handled correctly by this module, so this (for example) will **not** work correctly: `{{#invoke:DemoTemplate|1x|foo{!}}bar}}`

```
{{1x|foo|bar}} → Vorlage:1x
```
