

Modul:List

Vorlage:Lua

This module outputs various kinds of lists. At present, it supports bulleted lists, unbulleted lists, horizontal lists, ordered lists (numbered or alphabetical), and horizontal ordered lists. It allows for easy css styling of the list or of the individual list items.

Functions

Function name	Produces	Example output	Template using the function
		<ul style="list-style-type: none"> First item 	

Function name	Produces	Example output	Template using the function
bulleted	Bulleted lists	<ul style="list-style-type: none">• Second item• Third item	Vorlage:Tlx
unbulleted	Unbulleted lists	<ul style="list-style-type: none">• First item• Second item• Third item	Vorlage:Tlx
horizontal	Horizontal bulleted lists	<ul style="list-style-type: none">• First item• Second item• Third item	Vorlage:Tlx
ordered	Ordered lists (numbered lists and alphabetical lists)	<ol style="list-style-type: none">1. First item2. Second item3. Third item	Vorlage:Tlx
horizontal_ordered	Horizontal ordered lists	<ol style="list-style-type: none">1. First item2. Second item3. Third item	Vorlage:Tlx

Parameters

- Positional parameters (1, 2, 3...) - these are the list items. If no list items are present, the module will output nothing.
- `start` - sets the start item for ordered lists. This can be a start number for numbered lists, or a start letter for alphabetical lists. Horizontal ordered lists only support numbers.
- `type` - the type of marker used in ordered lists. Possible values are "1" for numbers (the default), "A" for uppercase letters, "a" for lowercase letters, "I" for uppercase **Roman numerals**, and "i" for lowercase Roman numerals. Not supported in horizontal ordered lists. See also the `list_style_type` parameter.
- `list_style_type` - the type of marker used in ordered lists. This uses CSS styling, and has more types available than the `type` parameter, which uses an **html attribute**. Possible values are listed at [MDN's list-style-type page](#). Support may vary by browser. `list-style-type` is an alias for this parameter.

- `class` - a custom class for the `Vorlage:Tag` tags surrounding the list, e.g. `plainlinks`.
- `style` - a custom css style for the `Vorlage:Tag` tags surrounding the list, e.g. `font-size: 90%;`.
- `list_style` - a custom css style for the list itself. The format is the same as for the `Vorlage:Para` parameter.
- `item_style` - a custom css style for all of the list items (the `Vorlage:Tag` tags). The format is the same as for the `Vorlage:Para` parameter.
- `item1_style`, `item2_style`, `item3_style`... - custom css styles for each of the list items. The format is the same as for the `Vorlage:Para` parameter.
- `item1_value`, `item2_value`, `item3_value`... - custom value for the given list item. List items following the one given will increment from the specified value. The value should be a positive integer. (Note that this option only has an effect on ordered lists.)
- `indent` - this parameter indents the list, for horizontal and horizontal ordered lists only. The value must be a number, e.g. 2. The indent is calculated in `em`, and is 1.6 times the value specified. If no indent is specified, the default is zero.

Examples

Bulleted lists

Code	Result
<pre>{{#invoke:list bulleted First item Second item Third item}}</pre>	<ul style="list-style-type: none"> • First item • Second item • Third item
<pre>{{#invoke:list bulleted First item Second item Third item item_style=color:blue;}}</pre>	<ul style="list-style-type: none"> • First item • Second item • Third item
<pre>{{#invoke:list bulleted First item Second item Third item item_style=background-color:yellow;}}</pre>	<ul style="list-style-type: none"> • First item • Second item

Code	Result
<code>item item1_style=background-color:yellow; item2_style=background-color:silver;}}</code>	<ul style="list-style-type: none"> • Third item

Unbulleted lists

Code	Result
<code>{{#invoke:list unbulleted First item Second item Third item}}</code>	<ul style="list-style-type: none"> • First item • Second item • Third item
<code>{{#invoke:list unbulleted First item Second item Third item item_style=color:blue;}}</code>	<ul style="list-style-type: none"> • First item • Second item • Third item
<code>{{#invoke:list unbulleted First item Second item Third item item1_style=background-color:yellow; item2_style=background-color:silver;}}</code>	<ul style="list-style-type: none"> • First item • Second item • Third item

Horizontal lists

Code	Result
	<ul style="list-style-type: none"> • First item • Second item

Code	Result
<code>{{#invoke:list horizontal First item Second item Third item}}</code>	<ul style="list-style-type: none"> • Third item
<code>{{#invoke:list horizontal First item Second item Third item indent=2}}</code>	<ul style="list-style-type: none"> • First item • Second item • Third item

Ordered lists

Code	Result
<code>{{#invoke:list ordered First item Second item Third item}}</code>	<ol style="list-style-type: none"> 1. First item 2. Second item 3. Third item
<code>{{#invoke:list ordered First item Second item Third item start=3}}</code>	<ol style="list-style-type: none"> 3. First item 4. Second item 5. Third item
<code>{{#invoke:list ordered First item Second item Third item type=i}}</code>	<ol style="list-style-type: none"> 1. First item 2. Second item 3. Third item
<code>{{#invoke:list ordered First item Second item Third item list_style_type=lower-greek}}</code>	<ol style="list-style-type: none"> 1. First item 2. Second item 3. Third item

Horizontal ordered lists

Code	Result
	<ol style="list-style-type: none"> 1. First item

Code	Result
<code>{{#invoke:list horizontal_ordered First item Second item Third item}}</code>	2. Second item 3. Third item
<code>{{#invoke:list horizontal_ordered First item Second item Third item start=3}}</code>	3. First item 4. Second item 5. Third item
<code>{{#invoke:list horizontal_ordered First item Second item Third item indent=2}}</code>	1. First item 2. Second item 3. Third item
