Modul:Module wikitext

Vorlage:Twinkle standard installation

Usage

This is an auxiliary module used to allow module pages to display wikitext. Use it by setting this module's `text` value to whatever content you want to display. The `_addText` helper method may be useful. For example, to tag a module with Vorlage:Tl, put `require('Module:Module wikitext')._addText('{{db-g7}}')` at the top of it.

```
local p = {}

p.text = ''

function p.main()
	return p.text
end

function p._addText(text, preprocessFrame)
	if preprocessFrame ~= false then
		text = (preprocessFrame or mw.getCurrentFrame()):preprocess(text)
	end
	p.text = p.text .. text
end

return p
```
