Modul:No globals/Doku

Dies ist die Dokumentationsseite für Modul:No globals

Vorlage:Used in system Vorlage:Module rating

This module causes an error if any nil global is read or if any global is written to, with the exception of *arg*. To use, add `require('Module:No globals')` to the top of the module using it. The *arg* variable is excluded because it is necessary for Scribunto's require function to work properly. (See the Scribunto source code here.)
