Seite von

Modul:Section link/Doku

Dies ist die Dokumentationsseite für [Modul:Section link](#)

This module creates links to sections, nicely formatted with the "\$" symbol instead of the default "#".

Inhaltsverzeichnis

- [1 Usage](#)
 - [1.1 From wikitext](#)
 - [1.2 From Lua](#)
- [2 Examples](#)

Usage

From wikitext

From wikitext, this module should be used via the template [Vorlage:Tl](#). Please see the template page for documentation.

From Lua

First, load the module:

```
local mSectionLink = require('Module:Section link')
```

You can then make section links via the `_main` function.

```
mSectionLink._main(page, sections, options, title)
```

Parameters:

- *page* - the page name to link to. Defaults to the full page name of *title*, or the current title if that is not specified.
- *sections* - an array of section names to link to, or a string to link to just one section name.
- *options* - a table of options. Accepts the following fields:
 - *nopage* - set this to true to avoid displaying the base page name in links.
- *title* - a default [mw.title object](#) to use instead of the current title. Intended for testing purposes.

All parameters are optional.

Examples

Lua code	Wikitext code	Result
Vorlage:Code	<code>{{section link Paris}}</code>	Vorlage:Section link
Vorlage:Code	<code>{{section link Paris Architecture}}</code>	Vorlage:Section link
Vorlage:Code	<code>{{section link Paris Architecture Culture}}</code>	Vorlage:Section link
Vorlage:Code	<code>{{section link Paris Architecture Culture Sport}}</code>	Vorlage:Section link
Vorlage:Code	<code>{{section link Paris Architecture Culture Sport nopage=yes}}</code>	Vorlage:Section link
