Modul:Warning

This module simply unifies the formatting of all warning messages similar to Module:Error. Currently, it is plain text, but custom formatting may be applied after discussion in the talk page. Warnings are displayed above the preview when previewing an edit.

Usage

```
local warn = require('Module:Warning')
warn("Message")
warn(("TypeWarning: %s"):format(warning), level)
```

```
local libraryUtil = require('libraryUtil')

local wrapper = "%s" -- wikitext formatting
local msg_loc = "Lua warning in %s at line %d: %s."
local msg = "Lua warning: %s."

return function (message, level)
        libraryUtil.checkType('warn', 2, level, 'number', true)
        level = level or 1
        if level > 0 then
                local _, location = pcall(error, '', level+2)
                if location ~= '' then
                        location = mw.text.split(location:sub(1,-3), ':%f[%d]')
                        message = msg_loc:format(location[1], location[2], messag
                else
                        message = msg:format(message)
                end
        else
                message = msg:format(message)
        end
        mw.addWarning(wrapper:format(message))
end
```
