## Drawing Bar charts: "bar chart"

### Parameters

parameter name	what it does
delimiter	string to delimit multiple values when given. default to colon ( : ). normally you do not want to touch this, it's provided for the off-chance you'll want to use colon as part of one of the parameters.
width	number. if provided, must be at least 200. default: 500
height	number. if provided, must be at least 200. default: 350
group n	(where "n" is a number. use "group 1", "group 2" etc. for as many groups as there are in the graph) the values to be charted. see below.

parameter name	what it does
tooltip	tooltip to be associated with specific bar. If no tooltip for a specific bar is defined, and this bar has a link, then this link will be used as tooltip. Otherwise, the tooltip will be combined from the group name and the value, optionally with "units prefix" and "units suffix".
link	links to articles to be associated with specific bar
stack	whether to stack the different groups on top of each other. do not specify to show bars side by side. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage: No wrap	useful only with stack: when set to true, tooltip will show accumulated value of all blocks up to current one
colors	the colors used to denote the various groups. should have exactly as many values as # of groups. can be given as standard html-recognized color names, or using #xxx or #xxxxxxx notation.
x legends	The legends for the X values. Wikicode, such as internal links or templates can be used.
Vorlage: No wrap	if set to true, group legends will not be shown below chart. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage: No wrap	set to use separate Y- scale for each group. leave empty to use one scale for all groups. incompatible with "stack". Note that even if some of the scales are exactly the same, they will be drawn separately when this setting is on. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage	

parameter name	what it does
: No wrap	used in tooltip. e.g., \$, so values will show as "\$500" instead of "500" in the tooltip
Vorlage: No wrap	ditto for units suffix. use, e.g. "Kg" so values will show as 88Kg instead of 88 in tooltip. underscore ("_") are replaced by spaces, to allow a space between the value and the suffix.
Vorlage: No wrap	names of different groups
Vorlage: No wrap	number of tick marks on the y axis. if the value is negative or omitted, the module will attempt to automatically calculate a sensible number of tick marks.

## Examples

### Basic

```

{{ #invoke:Chart | bar chart
| group 1 = 40 : 50 : 60 : 20
| group 2 = 20 : 60 : 12 : 44
| group 3 = 55 : 14 : 33 : 5
| links 1 = Apple : McCintosh : Golden delicious
| links 2 = Banana : Apricot : Peach
| links 3 = Orange : Pear : Bear
| tooltip 2 = tooltip 1 : tooltip 2 : tooltip 3 : tooltip 4
| colors = green : yellow : orange
| group names = Apple : Banana : Orange
| x legends = Before : During : After : Post mortem
}}

```

## Stacked

Here is the same graph, with more modest height and width, using "stack", and adding "units suffix" for good measure:

```

{{ #invoke:Chart | bar chart
  height = 250
  width = 300
  stack = 1
  group 1 = 40 : 50 : 60 : 20
  group 2 = 20 : 60 : 12 : 44
  group 3 = 55 : 14 : 33 : 5
  colors = green : yellow : orange
  group names = Apple : Banana : Orange
  units suffix = Kg
  x legends = Before : During : After : Post mortem
}}

```

### Scale per group

This option has been disabled. It was rarely used and broke in the last code update. Here is an example with large number of groups - mainly to test how it looks with large number of legends:

```

{{ #invoke:Chart | bar chart
| width = 800
| height = 550
| group 1 = 1:2:3:4:5:4:3:2:1
| group 2 = 1:2:3:4:5:4:3:2:1
| group 3 = 1:2:3:4:5:4:3:2:1
| group 4 = 1:2:3:4:5:4:3:2:1
| group 5 = 1:2:3:4:5:4:3:2:1
| group 6 = 1:2:3:4:5:4:3:2:1
| group 7 = 1:2:3:4:5:4:3:2:1
| group 8 = 1:2:3:4:5:4:3:2:1
| group 9 = 1:2:3:4:5:4:3:2:1
| group 10 = 1:2:3:4:5:4:3:2:1
| group 11 = 1:2:3:4:5:4:3:2:1
| group 12 = 1:2:3:4:5:4:3:2:1
| group 13 = 1:2:3:4:5:4:3:2:1
| group 14 = 1:2:3:4:5:4:3:2:1
| group 15 = 1:2:3:4:5:4:3:2:1
| group 16 = 1:2:3:4:5:4:3:2:1
| group 17 = 1:2:3:4:5:4:3:2:1
| group 18 = 1:2:3:4:5:4:3:2:1
| group 19 = 1:2:3:4:5:4:3:2:1
| group 20 = 1:2:3:4:5:4:3:2:1
| group 21 = 1:2:3:4:5:4:3:2:1
| colors = Silver:Gray:Black:Red:Maroon:Yellow:Olive:Lime:Green:Aqua:Teal:Blue:Ne
| group names = Alabama:Alaska:Arizona:Arkansas:California:Colorado:Connecticut:G
| x legends = 1920 : 1930 : 1940: 1950 : 1960 : 1970 : 1990 : 2000 : 2010
| units prefix = $
| units suffix = _billion
| stack = 1
}}

```

- Alabama
- Alaska
- Arizona
- Arkansas
- California
- Colorado
- Connecticut
- Delaware
- Florida
- Georgia
- Hawaii
- Idaho
- Illinois
- Indiana
- Iowa
- Kansas
- Kentucky
- Louisiana
- Maine
- Maryland
- Massachusetts

If there are many values, x legends can be diluted by using delimiters with nothing in between:

```
{ { #invoke:Chart | bar chart  
| group 1 = 1:2:3:4:5:6:7:8:9:10:11:12:13:14:15:16:17:18:19:20:21:22:23:24:25:26:  
:31:32:33:34:35:36:37:38:39:40:41:42:43:44:45:46:47:48:49:50:51:52:53:54:55:56:57:  
| units suffix = _Things  
| group names = Some  
| x legends = ::::1940::::::::::1950::::::::::1960::::::::::1970::::::::::1980:::  
}}
```

Vorlage:-

# Drawing Pie charts: "pie chart"

## Parameters

<b>p a r a m e t e r n a m e</b>	<b>what it does</b>
<b>d e l i m i t e r</b>	string to delimit multiple values when given. default to colon ( : ). normally you do not want to touch this, it's provided for the off-chance you'll want to use colon as part of one of the parameters.
<b>r a d i u s</b>	number. The radius of the pie in pixels
	<p>Tuples, in parenthesis. Use delimiter inside the tuple:</p> <div style="border: 1px dashed blue; padding: 5px; margin: 10px 0;"> <pre>( Value1 : Name1 : Color1 : Link1 ) ( Value2 : Name2 : Color2 : Link2 ) ...</pre> </div> <p>The values are numbers. The numbers can be integers or decimal fractions, or using the scientific notation: 7.24e6, 7,240,000, or 7240000.00 are all acceptable for 7 Million and 240 thousands.</p>

parameter name	what it does
slices	<p>Names are strings. Colors are optional. you can use any <b>Web colors</b>, such as "red" or "#FF0000". Up to 26 default colors are defined, but if your pie has more than 26 slices, you must define the colors of slice #27 and up. Links can be external or internal links, including linking to internal anchors and paragraphs in the same article, like so: <code>[[Article Tooltip]]</code> for internal link, <code>[[#Paragraph name Tooltip]]</code> for linking to an anchor in same article, or <code>[http://example.org Tooltip]</code> for external link.</p>
V or label: N	<p>alternative syntax to "slices". n is the slice number, beginning with 1. make sure not to skip: if you define "slice 1", "slice 2", "slice 4", "slice 5"..., skipping slice 3, only the first two slices will be shown. this syntax is incompatible with "slices", i.e., they should not be used in conjunction in the same invocation. Using both "slices" and "slice n" in the same invocation will cause unpredictable results. The value is like a single "tuple" as explained above, but without the parenthesis:</p>
Ow rap	<pre>slice 1 = Value1 : Name1 : Color1 : Link1 slice 2 = Value2 : Name2 : Color2 : Link2 ...</pre>
p	<p>This syntax allows you to use parenthesis in names, links, and colors.</p>
percentage	<p>if used, the percentage of each slice will be calculated and added to the legend: so if you have two slices, like so: ( 1 : Younglings ) ( 3 : elders ), and use define "percent", the legends will become "Younglings: 1 (25%)" and "Elders: 3 (75%)", instead of simply "Younglings: 1" and "Elders: 3". Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.</p>
V or label: a	

<p><b>p a r a m e t e r n a m e</b></p>	<p><b>what it does</b></p>
<p><b>g e : N o w r a p</b></p>	<p>used in the legend. e.g., defining "units prefix=\$", values will show as "\$500" instead of "500" in the legends</p>
<p><b>V o r l a g e : N o w r a p</b></p>	<p>ditto for units suffix. use, e.g. "Kg" so values will show as 88Kg instead of 88 in legend. underscore ("_") are replaced by spaces, to allow a space between the value and the suffix.</p>
<p><b>V o r l a g e : N</b></p>	

p  
a  
r  
a  
m  
e  
t  
e  
r  
n  
a  
m  
e

**what it does**

**o** Setting to true prevents displaying of the group legends under the chart. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.

## Drawing Bar charts: "bar chart"

### Parameters

parameter name	what it does
delimiter	string to delimit multiple values when given. default to colon ( : ). normally you do not want to touch this, it's provided for the off-chance you'll want to use colon as part of one of the parameters.
width	number. if provided, must be at least 200. default: 500
height	number. if provided, must be at least 200. default: 350
group n	(where "n" is a number. use "group 1", "group 2" etc. for as many groups as there are in the graph) the values to be charted. see below.
tooltip	tooltip to be associated with specific bar. If no tooltip for a specific bar is defined, and this bar has a link, then this link will be used as tooltip. Otherwise, the tooltip will be

parameter name	what it does
tip n	combined from the group name and the value, optionally with "units prefix" and "units suffix".
link s n	links to articles to be associated with specific bar
stack	whether to stack the different groups on top of each other. do not specify to show bars side by side. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage: No wrap	useful only with stack: when set to true, tooltip will show accumulated value of all blocks up to current one
colors	the colors used to denote the various groups. should have exactly as many values as # of groups. can be given as standard html-recognized color names, or using #xxx or #xxxxxx notation.
x legends	The legends for the X values. Wikicode, such as internal links or templates can be used.
Vorlage: No wrap	if set to true, group legends will not be shown below chart. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage: No wrap	set to use separate Y- scale for each group. leave empty to use one scale for all groups. incompatible with "stack". Note that even if some of the scales are exactly the same, they will be drawn separately when this setting is on. Any non-empty value means "yes". To say "no", simply do not supply this parameter at all, or leave the value blank.
Vorlage: No	

parameter name	what it does
wrap	used in tooltip. e.g., \$, so values will show as "\$500" instead of "500" in the tooltip
Vorlage : No wrap	ditto for units suffix. use, e.g. "Kg" so values will show as 88Kg instead of 88 in tooltip. underscore ("_") are replaced by spaces, to allow a space between the value and the suffix.
Vorlage : No wrap	names of different groups
Vorlage : No wrap	number of tick marks on the y axis. if the value is negative or omitted, the module will attempt to automatically calculate a sensible number of tick marks.

## Examples

### Basic

```
{{ #invoke:Chart | bar chart
| group 1 = 40 : 50 : 60 : 20
| group 2 = 20 : 60 : 12 : 44
| group 3 = 55 : 14 : 33 : 5
| links 1 = Apple : McCintosh : Golden delicious
| links 2 = Banana : Apricot : Peach
| links 3 = Orange : Pear : Bear
| tooltip 2 = tooltip 1 : tooltip 2 : tooltip 3 : tooltip 4
| colors = green : yellow : orange
| group names = Apple : Banana : Orange
| x legends = Before : During : After : Post mortem
}}
```

## Stacked

Here is the same graph, with more modest height and width, using "stack", and adding "units suffix" for good measure:

```

{{ #invoke:Chart | bar chart
| height = 250
| width = 300
| stack = 1
| group 1 = 40 : 50 : 60 : 20
| group 2 = 20 : 60 : 12 : 44
| group 3 = 55 : 14 : 33 : 5
| colors = green : yellow : orange
| group names = Apple : Banana : Orange
| units suffix = Kg
| x legends = Before : During : After : Post mortem
}}

```

Before During After Post  
mortem

## Scale per group

This option has been disabled. It was rarely used and broke in the last code update. Here is an example with large number of groups - mainly to test how it looks with large number of legends:

```

{{ #invoke:Chart | bar chart
  width = 800
  height = 550
  group 1 = 1:2:3:4:5:4:3:2:1
  group 2 = 1:2:3:4:5:4:3:2:1
  group 3 = 1:2:3:4:5:4:3:2:1
  group 4 = 1:2:3:4:5:4:3:2:1
  group 5 = 1:2:3:4:5:4:3:2:1
  group 6 = 1:2:3:4:5:4:3:2:1
  group 7 = 1:2:3:4:5:4:3:2:1
  group 8 = 1:2:3:4:5:4:3:2:1
  group 9 = 1:2:3:4:5:4:3:2:1
  group 10 = 1:2:3:4:5:4:3:2:1
  group 11 = 1:2:3:4:5:4:3:2:1
  group 12 = 1:2:3:4:5:4:3:2:1
  group 13 = 1:2:3:4:5:4:3:2:1
  group 14 = 1:2:3:4:5:4:3:2:1
  group 15 = 1:2:3:4:5:4:3:2:1
  group 16 = 1:2:3:4:5:4:3:2:1
  group 17 = 1:2:3:4:5:4:3:2:1
  group 18 = 1:2:3:4:5:4:3:2:1
  group 19 = 1:2:3:4:5:4:3:2:1
  group 20 = 1:2:3:4:5:4:3:2:1
  group 21 = 1:2:3:4:5:4:3:2:1
  colors = Silver:Gray:Black:Red:Maroon:Yellow:Olive:Lime:Green:Aqua:Teal:Blue:Na
  group names = Alabama:Alaska:Arizona:Arkansas:California:Colorado:Connecticut:
  x legends = 1920 : 1930 : 1940: 1950 : 1960 : 1970 : 1990 : 2000 : 2010
  units prefix = $
  units suffix = _billion
  stack = 1
}}

```

- Alabama
- Alaska

# Vorlage:Graph:Chart

---

Vorlage:Lua Vorlage:Uses TemplateStyles

## Parameters

---

### chart

---

Creates a JSON object for <graph> to display charts. In the article namespace the template **Vorlage:TI** should be used instead. See its page for use cases.

#### Parameters:

- **width:** width of the chart
- **height:** height of the chart
- **type:** type of the chart: `line` for **line charts**, `area` for **area charts**, and `rect` for (column) **bar charts**, and `pie` for **pie charts**. Multiple series can stacked using the stacked prefix, e.g. `stackedarea`.
- **interpolate:** **interpolation** method for line and area charts. It is recommended to use `monotone` for a **monotone cubic interpolation** – further supported values are listed at <https://github.com/vega/vega/wiki/Marks#area>.
- **colors:** color palette of the chart as a comma-separated list of colors. The color values must be given either as `#rgb/#rrggbb/#aarrggbb` or by a **CSS color name**. For `#aarrggbb` the `aa` component denotes the **alpha channel**, i.e. `FF`=100% opacity, `80`=50% opacity/transparency, etc. (The default color palette is `category10`).
- **xAxisTitle** and **yAxisTitle:** captions of the x and y axes
- **xAxisMin**, **xAxisMax**, **yAxisMin**, and **yAxisMax:** minimum and maximum values of the x and y axes
- **xAxisFormat** and **yAxisFormat:** changes the formatting of the axis labels. Supported values are listed at <https://github.com/d3/d3-3.x-api-reference/blob/master/Formatting.md#numbers> for numbers and <https://github.com/d3/d3-3.x-api-reference/blob/master/Time-Formatting.md> for date/time. For example, the format `%` can be used to output percentages.
- **xAxisAngle:** rotates the x axis labels by the specified angle. Recommended values are: `-45`, `+45`, `-90`, `+90`
- **xType** and **yType:** Data types of the values, e.g. `integer` for integers, `number` for real numbers, `date` for dates (e.g. `YYYY/MM/DD`), and `string` for ordinal values.
- **x:** the x-values as a comma-separated list (if a value itself contains a comma it must be escaped with a backslash, i.e. it needs to be written as `\,`)
- **y** or **y1**, **y2**, ...: the y-values for one or several data series, respectively. For pie charts `y2` denotes the radiuses of the corresponding sectors.
- **legend:** show legend (only works in case of multiple data series)
- **y1Title**, **y2Title**, ...: defines the label of the respective data series in the legend
- **linewidth:** line width for line charts or distance between the pie segments for pie charts

- **showValues:** Additionally, output the y values as text. (Currently, only (non-stacked) bar and pie charts are supported.) The output can be configured used the following parameters provided as `name1:value1, name2:value2`:
  - **format:** Format the output according to <https://github.com/d3/d3-3.x-api-reference/blob/master/Formatting.md#numbers> for numbers and <https://github.com/d3/d3-3.x-api-reference/blob/master/Time-Formatting.md> for date/time.
  - **fontcolor:** text color
  - **fontsize:** text size
  - **offset:** move text by the given offset. For bar charts and pie charts with `midangle` this also defines if the text is inside or outside the chart.
  - **angle** (pie charts only): text angle in degrees or `midangle` (default) for dynamic angles based on the mid-angle of the pie sector.
- **innerRadius:** For pie charts: defines the inner radius to create a *doughnut chart*.
- **formatjson:** format JSON object for better legibility

## Examples

---

Line Chart:

```
{{Graph:Chart|width=400|height=100|type=line|x=1,2,3,4,5,6,7,8|y=10, 12, 6, 14, 2, 10, 7, 9}}
```

Note: The y-axis starts from the smallest y value, though this can be overridden with the `yAxisMin` parameter.

Area chart:

```
{{Graph:Chart|width=400|height=100|type=area|x=1,2,3,4,5,6,7,8|y=10, 12, 6, 14, 2, 10, 7, 9}}
```

Note: The y-axis starts from zero

Bar chart:

```
{{Graph:Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|type=rect|x=1,2,3,4,5,6,7,8|y=10, 12, 6, 14, 2, 10, 7, 9}}
```

Line chart with more than one data series, using colors:

```
{{Graph:Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|legend=Legend|type=line|x=1,2,3,4,5,6,7,8|y1=10, 12, 6, 14, 2, 10, 7, 9 |y2=2,4,6,8,13,11,9,2|colors=#0000aa,#ff8000}}
```

Area chart with more than one data series showing blended overlap:

```
{{Graph:Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|legend=Legend|type=area|x=1,2,3,4,5,6,7,8|y1=10, 12, 6, 14, 2, 10, 7, 9 |y2=2,4,6,8,13,11,9,2|colors=#800000aa,#80ff8000}}
```

Bar chart with multiple data series:

```
{{Graph:Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|legend=Legend|type=rect|x=1,2,3,4,5,6,7,8|y1=10, 12, 6, 14, 2, 10, 7, 9 |y2=2,4,6,8,13,11,9,2|colors=#800000aa,#80ff8000}}
```

Area chart with smoothed data values:

```
{{Graph:  
Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|legend=Legend|type=stackedarea:  
2,3,4,5,6,7,8|y1=10, 12, 6, 14, 2, 10, 7, 9 |y2=2,4,6,8,13,11,9,2  
|interpolate=monotone|colors=seagreen, orchid}}
```

Bar chart with stacked data series:

```
{{Graph:  
Chart|width=400|height=100|xAxisTitle=X|yAxisTitle=Y|legend=Legend|type=stackedrect  
2,3,4,5,6,7,8|y1=10, 12, 6, 14, 2, 10, 7, 9 |y2=2,4,6,8,13,11,9,2|y1Title=Data  
A|y2Title=Data B|colors=seagreen, orchid}}
```

Note that the order of the stacking is governed by the alphabetic value of the y-Titles used for the legend. You can always prepend a number 1, 2, 3 to establish whatever stacking order you want.
