Modul:Clickable button 2

This module implements the [Vorlage:Tl](#) template.

Usage from wikitext

To use this template from wikitext, you should normally use the [Vorlage:Tl](#) template. However, it can also be used with the syntax `{{#invoke:Clickable button 2|main|`*args*`}}`. Please see the template page for a list of available parameters.

Usage from Lua modules

To use this module from other Lua modules, first load the module.

```
local mClickableButton2 = require('Module:Clickable button 2')
```

You can then generate a button using the luaMain function.

```
mClickableButton2.luaMain(args)
```

The *args* variable should be a table containing the arguments to pass to the module. To see the different arguments that can be specified and how they affect the module output, please refer to the [Vorlage:Tl](#) template documentation.

```lua
-- This module implements {{clickable button 2}}.

local yesno = require('Module:Yesno')

local p = {}

function p.main(frame)
        local args = require('Module:Arguments').getArgs(frame, {
                wrappers = 'Template:Clickable button 2'
        })
        return p.luaMain(args)
end

function p.luaMain(args)
        -- If first arg or a url is not provided,
        -- but we have a second arg, make a button.
        -- Otherwise, return nothing.
        if not args[1] and not args.url then
                if args[2] then
```

```lua
                                p.nolink = true
                        else
                                return ''
                        end
                end

                local data = p.makeLinkData(args)
                local link = p.renderLink(data)
                local trackingCategories = p.renderTrackingCategories(args)
