3. Modul:Convert/sandbox/testcases	64

Modul:Convert/sandbox

When making a change, copy the current modules to the sandbox pages, then edit the sandbox copies.

If wanted, use the purge link just above to update the following status report.

- [Module:Convert](#) • [Module:Convert/sandbox](#) • [same content](#)
- [Module:Convert/data](#) • [Module:Convert/data/sandbox](#) • [same content](#)
- [Module:Convert/text](#) • [Module:Convert/text/sandbox](#) • [same content](#)
- [Module:Convert/extra](#) • [Module:Convert/extra/sandbox](#) • [same content](#)
- [Module:Convert/wikidata](#) • [Module:Convert/wikidata/sandbox](#) • [same content](#)
- [Module:Convert/wikidata/data](#) • [Module:Convert/wikidata/data/sandbox](#) • [same content](#)

Use the following template to test the results (example `{{convert/sandbox|123|lb|kg}}`):

- [Template:Convert/sandbox](#) • invokes the sandbox modules and shows all warnings

Testscases:

- [Module:Convert/sandbox/testcases](#) • templates to be tested, with expected outputs
- [Module talk:Convert/sandbox/testcases](#) • view test results
- [Template:Convert/testcases#Sandbox testcases](#) • more tests

It is not necessary to save a module before viewing test results. For example, [Module:Convert/sandbox](#) could be edited. While still editing that page, paste

[Vorlage:Nowrap](#)

into the page title box under "Preview page with this template", then click "Show preview".

```
-- Convert a value from one unit of measurement to another.
-- Example: {{convert|123|lb|kg}} --> 123 pounds (56 kg)
-- See [[:en:Template:Convert/Transwiki guide]] if copying to another wiki.

local function extract_fraction(parms, text, negative)
    -- If text represents a fraction, return
    -- value, altvalue, show, denominator
    -- where
    -- value is a number (value of the fraction in argument text)
    -- altvalue is an alternate interpretation of any fraction for the hands
    -- unit where "12.1+3/4" means 12 hands 1.75 inches
    -- show is a string (formatted text for display of an input value,
    -- and is spelled if wanted and possible)
    -- denominator is value of the denominator in the fraction
    -- Otherwise, return nil.
    -- Input uses en digits and '.' decimal mark (input has been translated)
    -- Output uses digits in local language and local decimal mark, if any.
    -----
    -- Originally this function accepted x+y/z where x, y, z were any valid
    -- numbers, possibly with a sign. For example '1.23e+2+1.2/2.4' = 123.5,
    -- and '2-3/8' = 1.625. However, such usages were found to be errors or
    -- misunderstandings, so since August 2014 the following restrictions apply:
    -- x (if present) is an integer or has a single digit after decimal mark
    -- y and z are unsigned integers
    -- e-notation is not accepted
    -- The overall number can start with '+' or '-' (so '12+3/4' and '+12+3/4'
    -- and '-12-3/4' are valid).
    -- Any leading negative sign is removed by the caller, so only inputs
    -- like the following are accepted here (may have whitespace):
    -- negative = false      false      true (there was a leading '-')
    -- text      = '2/3'      '+2/3'      '2/3'
    -- text      = '1+2/3'    '+1+2/3'    '1-2/3'
    -- text      = '12.3+1/2' '+12.3+1/2' '12.3-1/2'
    -- Values like '12.3+1/2' are accepted, but are intended only for use
    -- with the hands unit (not worth adding code to enforce that).
    -----

Modul:Convert/sandbox/Doku

Dies ist die Dokumentationsseite für **Modul:Convert/sandbox**

When making a change, copy the current modules to the sandbox pages, then edit the sandbox copies.

If wanted, use the purge link just above to update the following status report.

- [Module:Convert](#) • [Module:Convert/sandbox](#) • [same content](#)
- [Module:Convert/data](#) • [Module:Convert/data/sandbox](#) • [same content](#)
- [Module:Convert/text](#) • [Module:Convert/text/sandbox](#) • [same content](#)
- [Module:Convert/extra](#) • [Module:Convert/extra/sandbox](#) • [same content](#)
- [Module:Convert/wikidata](#) • [Module:Convert/wikidata/sandbox](#) • [same content](#)
- [Module:Convert/wikidata/data](#) • [Module:Convert/wikidata/data/sandbox](#) • [same content](#)

Use the following template to test the results (example `{{convert/sandbox|123|lb|kg}}`):

- [Template:Convert/sandbox](#) • invokes the sandbox modules and shows all warnings

Testscases:

- [Module:Convert/sandbox/testcases](#) • templates to be tested, with expected outputs
- [Module talk:Convert/sandbox/testcases](#) • view test results
- [Template:Convert/testcases#Sandbox testcases](#) • more tests

It is not necessary to save a module before viewing test results. For example, [Module:Convert/sandbox](#) could be edited. While still editing that page, paste

[Vorlage:Nowrap](#)

into the page title box under "Preview page with this template", then click "Show preview".
