Inhaltsverzeichnis

Modul:Convert/extra

This module can be used to quickly add a new unit for use with Vorlage:Tl. When satisfied that a unit is working correctly, ask at Module talk:Convert for the unit to be moved to the permanent list of units.

See Template:Convert/unit sandbox for a good way to prepare unit definitions that can be copied into this page.

The following extracts from Module:Convert/data show examples that could be used to define a new unit. Any number of spaces can be used where blanks are shown in the following.

    },
}
```

Vorlage:Collapse bottom

Field	Description
`symbol`	Unit identifier used when `abbr=on` is in effect.
`name1`	Singular name of the unit used when `abbr=off` is in effect.
`name2`	Plural name of the unit; not required if it is the same as `name1` plus "s".

`name1_us`	Singular name when `sp=us` is in effect; not required if the same as `name1`.
`name2_us`	Plural name when `sp=us` is in effect; not required if the same as `name1_us` plus "s".
`utype`	Unit type; must be exactly the same as the `utype` of any other unit used in a conversion.
`scale`	Number of base units in the unit being defined.
`default`	Unit code of the default output used when no output unit is specified in a conversion.
`target`	Unit code of an existing unit (the unit being defined "redirects" to the existing unit).
`prefixes`	Use 1 if an SI prefix is accepted; 2 is used for `m2`, and 3 is used for `m3`.
`link`	Article title used when `lk=on` is in effect; not required if it is the same as `name1`.

```
-- Extra conversion data used by Module:Convert.
--
-- [[Module:Convert/data]] defines all units and is transcluded in all pages
-- where [[Module:Convert]] is used. Testing new units by editing that module
-- would invalidate the cache for all affected pages.
--
-- For quick changes and experiments with new units, this module can be edited.
-- Since this module is transcluded in only a small number of pages, changes
-- should cause little server overhead and should propagate quickly.
--
-- If a unit is defined in the data module, any definition here is ignored,
-- so defining the same unit in both modules is not an error.
-- A unit defined here can refer to units that are also defined here, and
-- can refer to units defined in the data module.
--
-- Periodically, those extra units that are wanted permanently can be removed
-- from here after being added to [[Module:Convert/data]].
