# Modul:DemoTemplate/Doku

---

**Dies ist die Dokumentationsseite für Modul:DemoTemplate**

## Usage

---

Simply place "#invoke:DemoTemplate|" before a call to a template. For example, `{{#invoke:DemoTemplate|Convert|10|km|nmi|abbr=off}}` yields the following:

`{{Convert|10|km|nmi|abbr=off}}` → **Vorlage:Convert**

This module handles both named and positional parameters as well as equals signs in both parameter names and values correctly, so this (for example) will work: `{{#invoke:DemoTemplate|1x|1=Some parameter with an = sign in it}}`

`{{1x|1=Some parameter with an = sign in it}}` → **Vorlage:1x**

Note, however, that pipes, curly braces, etc. are not currently handled correctly by this module, so this (for example) will **not** work correctly: `{{#invoke:DemoTemplate|1x|foo{!}bar}}`

`{{1x|foo|bar}}` → **Vorlage:1x**
