Modul:Documentation/Doku

Dies ist die Dokumentationsseite für Modul:Documentation

Vorlage:Lua

This module displays a blue box containing documentation for templates, Lua modules, or other pages. The Vorlage:Tl template invokes it.

Normal usage

For most uses, you should use the Vorlage:Tl template; please see that template's page for its usage instructions and parameters.

Use in other modules

To use this module from another Lua module, first load it with `require`:

```
local documentation = require('Module:Documentation').main
```

Then you can simply call it using a table of arguments.

```
documentation{content = 'Some documentation', ['link box'] = 'My custom link box'
```

Please refer to the template documentation for usage instructions and a list of parameters.

Porting to other wikis

The module has a configuration file at Module:Documentation/config which is intended to allow easy translation and porting to other wikis. Please see the code comments in the config page for instructions. If you have any questions, or you need a feature which is not currently implemented, please leave a message at Template talk:Documentation to get the attention of a developer.

The messages that need to be customized to display a documentation template/module at the top of module pages are MediaWiki:Scribunto-doc-page-show and MediaWiki:Scribunto-doc-page-does-not-exist.
