## Modul:Lua banner

**Vorlage:Lua** This module implements the **Vorlage:TI** template.

### Usage from wikitext

This module cannot be used directly from wikitext. It can only be used through the **Vorlage:TI** template. Please see the template page for documentation.

### Usage from Lua modules

To use this module from other Lua modules, first load the module.

```
local mLuaBanner = require('Module:Lua banner')
```

You can then generate a side box using the `_main` function.

```
mLuaBanner._main(args)
```

The `args` variable should be a table containing the arguments to pass to the module. To see the different arguments that can be specified and how they affect the module output, please refer to the **Vorlage:TI** template documentation.

### Tracking category

- **Vorlage:Clc**
