Modul:No globals/Doku

Dies ist die Dokumentationsseite für [Modul:No globals](#)

[Vorlage:Used in system](#) [Vorlage:Module rating](#)

This module causes an error if any nil [global](#) is read or if any global is written to, with the exception of *arg*. To use, add `require('Module:No globals')` to the top of the module using it. The *arg* variable is excluded because it is necessary for Scribunto's [require](#) function to work properly. (See the Scribunto source code [here](#).)
