Modul:No globals

Vorlage:Used in system Vorlage:Module rating

This module causes an error if any nil global is read or if any global is written to, with the exception of *arg*. To use, add `require('Module:No globals')` to the top of the module using it. The *arg* variable is excluded because it is necessary for Scribunto's require function to work properly. (See the Scribunto source code here.)

- Module:Log globals – adds all nil global reads/writes to the Lua log

```
local mt = getmetatable(_G) or {}
function mt.__index (t, k)
        if k ~= 'arg' then
                error('Tried to read nil global ' .. tostring(k), 2)
        end
        return nil
end
function mt.__newindex(t, k, v)
        if k ~= 'arg' then
                error('Tried to write global ' .. tostring(k), 2)
        end
        rawset(t, k, v)
end
setmetatable(_G, mt)
```
