Modul:Shortcut

This module makes a box showing the shortcut links to a page.

Inhaltsverzeichnis

Usage

From wikitext

From wikitext, this module should be called from a template, usually Vorlage:Tl. Please see the template page for documentation. However, it can also be called using the syntax `{{#invoke:shortcut|main|`*`arguments`*`}}`.

From Lua

To use this module from Lua, first load it.

```
local mShortcut = require('Module:Shortcut')
```

Then you can create shortcut boxes with the following syntax:

```
mShortcut._main(shortcuts, options, frame, cfg)
```

- *shortcuts* is an array of shortcut page names. (required)
- *options* is a table of options. The following keys are supported:
  - `msg` - a message to leave after the list of shortcuts.
  - `category` - if set to false (or a value regarded as false by Module:Yesno, such as "no"), categories are suppressed.
- *frame* a frame object. This is optional, and only intended to be used internally.
- *cfg* a table of config values. This is optional, and is only intended for testing.

Technical details

This module has a configuration file at Module:Shortcut/config. It can be used to translate this module into different languages or to change details like category names.

```
-- This module implements {{shortcut}}.

-- Set constants
local CONFIG_MODULE = 'Module:Shortcut/config'

-- Load required modules
local checkType = require('libraryUtil').checkType
local yesno = require('Module:Yesno')

local p = {}
