

Modul:Warning

This module simply unifies the formatting of all warning messages similar to [Module:Error](#). Currently, it is plain text, but custom formatting may be applied after discussion in the [talk](#) page. Warnings are displayed above the preview when previewing an edit.

Usage

```
local warn = require('Module:Warning')
warn("Message")
warn(("TypeWarning: %s"):format(warning), level)
```

```
local libraryUtil = require('libraryUtil')

local wrapper = "%s" -- wikitext formatting
local msg_loc = "Lua warning in %s at line %d: %s."
local msg = "Lua warning: %s."

return function (message, level)
    libraryUtil.checkType('warn', 2, level, 'number', true)
    level = level or 1
    if level > 0 then
        local _, location = pcall(error, '', level+2)
        if location ~= '' then
            location = mw.text.split(location:sub(1,-3), ':%f[%d]')
            message = msg_loc:format(location[1], location[2], message)
        else
            message = msg:format(message)
        end
    else
        message = msg:format(message)
    end
    mw.addWarning(wrapper:format(message))
end
```
